- 1 timer
- 2 Lenses 60-110mm + 35mm
- 2 Cables 16-13amp jumpers
- 2 16amp out of machines
- 2 carousels

WARNING!

XENON lamp contains gas under pressure Read instructions carefully before Operating or Moving.

The Xenon bulb contains pressurized gas.

Protective clothing and safety glassed should be work at all times.

Avoid direct exposure or viewing of an energized bulb in order to prevent ultraviolet damage.

Never operate the projector with the bulb cover off.

Do not permit light from the bulb to fall directly on skin or clothing. The light from a xenon bulb is rich in ultraviolet rays similar to direct sunrays. This could burn skin and bleach clothing.

Do not look at the bulb directly while it is on. The light emerging from the projector lens is safe as long as common sense is exercised.

Allow bulb to cool fully before moving projector.

Do not handle the bulb.

OPERATING INSTRUCTIONS

TO switch ON:

Place the projector on a flat and level surface and adjust the leveling feet by turning.

Make sure that the power on/off switch is in the off position then plug the power cable into the power connector and tighten.

Turn the power on/off switch to ON.

Using black knob on side of (Hokushin) projector body: turn Fan ON. The blower fan will start. Wait .

Now turn knob to LAMP ON position, The lamp should start to glow. It will take a few seconds to come to full brilliance.

Load the projector with a slide tray. Align the 0 position of the tray with the slide gate.

To advance the tray press the slide forward button once the tray will advance to the 1 position.

To move the tray backwards press the reverse button once and the tray will move back a step.

Connect your remote control device/timer.

TO switch OFF:

Turn knob to lamp off position. The lamp will go off but the fan will continue.

WAIT 15 mins to cool (the fan will continue the cooling process)

After 15mins switch to fan off position.

Turn the power switch to the OFF position.
